A Missingness

The value of any dataset hinges on its completeness. In an effort to provide the highest levels of transparency, this section will discuss PEAR’s levels of missingness. Before turning to evaluating the levels of missingness in PEAR itself, a discussion about which legislative terms I was able to collect data for in the first place is warranted.

Combining [Lührmann et al. \(2018\)](#), [Geddes et al. \(2014\)](#), [Chin et al. \(2021\)](#), and [Boix et al. \(2013\)](#), I identified a total of 1,474 legislative terms that were coded as authoritarian by at least one of the four datasets. The goal was to provide data for as many authoritarian legislative terms as possible so that researchers would not have to rely exclusively on any of the abovementioned regime classifications.

Figure A1 shows that out of all 1,474 authoritarian (s)election-years, I was able to collect data for 882 of them. This corresponds to a share of 60%. While not perfect, this level of missingness is to be expected given how much more difficult it is to locate information on authoritarian regimes compared to democracies. Future iterations of PEAR will attempt to fill the existing gaps and provide a more complete coverage. In the following, I will provide more details as to where exactly data is missing.

Figure A1: Missingness Legislative Terms

Figure A2 highlights how complete PEAR is in regards to different time periods. It shows the share of regimes included in PEAR in any given (s)election-year. In earlier

periods of the dataset, coverage hovers around 50% for legislative terms on a fairly consistent level until around 1990. Some of the regimes with several legislative terms in earlier periods of this dataset for which I have been unable to locate information about individual MPs include Cuba, Egypt, and Syria. From 1990, coverage increases rapidly up until 2024. In recent years, I have also achieved a coverage of 100% for individual years. Thus, PEAR is somewhat biased towards legislative terms from more recent historical periods and shows larger gaps as one goes back in time.

Figure A2: Missingness Over Time

In addition to historical differences, PEAR also shows differences in coverage across geographical regions. Using [Coppedge et al. \(2021\)](#)'s categorization of regions, Figure A3 shows how many legislative terms I have been able to collect from 1945 to 2024 across different regions. First, for Western Europe and North America, I have been able to identify MPs for all legislative terms under autocracy. This includes, for instance, the cases of Greece, Portugal, and Spain. In Asia and the Pacific as well as Eastern Europe (and Central Asia), PEAR achieves a coverage of around 75%. Regimes that are missing in both these regions include Afghanistan and Myanmar as well as Communist Hungary and Romania. Missingness is a more substantial issue in the Middle East and North Africa, Latin America and the Caribbean as well as Sub-Saharan Africa.

Figure A3: Missingness By Region

Finally, as the comparison of missingness across regions already alludes to, missingness is also a function of regimes' level of development. Figure A4 shows that data on legislative terms tends to be missing in regime-years with lower levels of GDP per capita, while those that I was able to collect tend to have a higher level of development.

Figure A4: Missingness By GDP

Finally and perhaps most importantly for any future research using PEAR, it is important to assess whether the legislatures from which data were collected are not systematically different from those that are not covered in the data. To analyse this, I compare legislatures included in PEAR with those not included in PEAR according to V-Dem's ([Coppedge et al., 2021](#)) Legislative Constraints on the Executive Index. The index assesses to what extent legislatures are capable of constraining the executive and includes specific indicators such as whether parliaments question officials in practice, have executive oversight, or initiate their own investigations. Figure [A5](#) shows that there are no significant differences across legislatures that have been collected. The missing legislatures tend to be slightly less constraining overall, but this difference is not statistically significant.

Figure A5: Missingness By Legislative Constraints

An alternative way of comparing legislatures is the nature of the competition in entering parliament. [Geddes et al. \(2018\)](#) devised a coding scheme that divides authoritarian legislatures into those featuring competitive elections and a significant share of opposition supporters, only competitive elections that opposition candidates competed in, competitive elections that only regime insiders participated in, and further types. Figure [A6](#) shows their eight types of legislatures and the absolute numbers for those legislatures that are collected and those that are missing. PEAR includes legislatures of all types, and for most categories, more legislative terms are collected than are missing. Only among those legislatures in which all delegates are from the ruling party, but in which some were identified through competitive, multi-candidate elections (Category 3), and for cases in which the national legislature is selected indirectly, that is, if deputies are chosen by lower-level bodies (Category 6), a majority of cases are missing rather than included in PEAR.

Figure A6: Missingness By Legislative Competition

Altogether, PEAR shows a slant towards completeness for more recent legislative terms, for those in more developed authoritarian regimes, and those in Europe, the Asia-Pacific, and Central Asia, while there are some more gaps for regimes in the Middle East and North Africa, Sub-Saharan Africa, and Latin America and the Caribbean. Researchers planning to use PEAR must carefully consider the implications this has for their particular research question and sample. Future versions of PEAR will likely alleviate some of these issues as more and more researchers embark on country-specific data collection efforts that may be incorporated into PEAR.

In the next step, I am highlighting the levels of missingness in the actual PEAR dataset. PEAR contains variables on the coverage of the MPs, the coverage of their gender, the coverage of their age, as well as the coverage of their party affiliations by legislative terms, which will be used for this analysis.

For those legislative terms that are available in PEAR, the identification of MPs is generally complete. For most legislative terms, the number of MPs collected for PEAR corresponds to 100% of statutory members. Similarly, MPs' gender has generally been identified across regimes. A mean coverage of 97% suggests a high degree of completeness. Out of the four basic variables on coverage, the one on MPs' age

is the most incomplete one. The mean of 53% for age coverage suggests that there are also several legislative terms for which MPs' years of birth could not be identified. Finally, party affiliations have been identified to a satisfactory extent for most legislative terms. However, for countries such as China, for instance, PEAR cannot distinguish between members of the ruling Chinese Communist Party, members of the minor parties, or unaffiliated delegates. Table A1 shows the full details on those four coverage variables.

Table A1: Descriptive Statistics for Coverage Variables
by Legislative Term

Variable	Unique	Mean	Min	Median	Max
Coverage MPs	260	99.4	57.7	100.0	117.3
Coverage Gender	314	97.3	0.3	100.0	117.3
Coverage Age	666	53.0	0.0	47.7	117.3
Coverage Party	298	81.3	0.0	100.0	105.6

Finally, Table A2 breaks this down even further by world regions. The patterns displayed here follow the ones shown above regarding the inclusion of legislative terms in PEAR. Eastern Europe and Western Europe, generally, tend to have the highest levels of coverage across most of these four variables while coverage for Sub-Saharan Africa, Latin America, and the Middle East and North Africa can be more patchy. Therefore, before using any of the variables in PEAR, researchers should make sure to check the coverage for the variable they are interested in using and, if necessary, exclude any observations that do not meet their desired level of completeness.

Table A2: Mean Coverage Variables by Region
by Legislative Term

Region	Coverage MPs	Coverage Gender	Coverage Age	Coverage Party
Eastern Europe and Central Asia	100.0	100.0	76.9	78.9
Latin America and Caribbean	99.2	98.7	33.5	74.1
Middle East and North Africa	100.0	99.6	46.7	82.2
Sub-Saharan Africa	98.3	97.3	39.7	90.1
Western Europe and N. America	100.1	100.1	82.1	67.7
Asia and Pacific	99.6	92.0	54.5	76.9

B List of Countries

Table A3: Sample of Autocracies included in PEAR

Country	Legislature	n
Afghanistan	2005, 2010	2
Albania	1946, 1950, 1954, 1958, 1962, 1966, 1970, 1974, 1978, 1982, 1987, 1991, 1992, 1996, 1997, 2001	16
Algeria	1997, 2002, 2007, 2012, 2017, 2021	6
Angola	1992, 2008, 2012, 2017, 2022	5
Antigua and Barbuda	1984, 1989, 1994, 1999	4
Argentina	1946, 1948, 1951, 1954, 1958, 1960, 1962, 1963, 1965, 1973, 1983	11
Armenia	1995, 1999, 2003, 2007, 2012, 2017	6
Azerbaijan	1991, 1995, 2000, 2005, 2010, 2015, 2020, 2024	8
Bahrain	1973, 2002, 2006, 2010, 2014, 2018, 2022	7
Bangladesh	1973, 1979, 1986, 1988, 1991, 2001, 2009, 2014, 2019, 2024	10
Belarus	1997, 2000, 2004, 2008, 2012, 2016, 2019, 2024	8
Benin	1991, 2019, 2023	3
Bhutan	2008, 2013, 2018	3
Bolivia	1966, 1979, 1980, 1985, 2019, 2020	6
Bosnia and Herzegovina	1996	1
Botswana	1966, 1969, 1974, 1979, 1984, 1989, 1994, 1999, 2004, 2009, 2014, 2019	12
Brazil	1947, 1951, 1955, 1959, 1963, 1967, 1971, 1975, 1979, 1983	10
Bulgaria	1946, 1950, 1954, 1958, 1962, 1966, 1971, 1976, 1981, 1986	10
Burkina Faso	1992, 1997, 2002, 2012, 2015	5
Burundi	2010, 2015, 2020	3
Cambodia	1993, 1998, 2003, 2008, 2013, 2018, 2023	7
Cameroon	1973, 1978, 1983, 1988, 1992, 1997, 2002, 2007, 2013, 2020	10
Cape Verde	1975, 1980, 1985	3
Central African Republic	2020	1
Chad	2011, 2024	2
Chile	1945, 1949, 1953, 1957	4

C Cases of Gender Discrepancy

These are cases where the share of women recorded in PEAR deviates from [Hughes et al. \(2017\)](#) or [Coppedge et al. \(2021\)](#) by more than 3 percentage points.

1) **Bangladesh 2001**

The other datasets have not included the reserved seats for women in their analysis. There were 45 of them and, in consequence, the difference between PEAR and V-Dem and Hughes et al. (2017) is quite large in this case.

2) **Malawi 1983**

The data in PEAR for this case is coming directly from the Malawi Government providing little reason to believe that this contains any errors.

3) **El Salvador 1956**

Unclear where the difference is coming from. Other datasets do not include any women for this legislative term, whereas PEAR's data comes from the official parliamentary history. Wikipedia also mentions the four female MPs as the first MPs in the history of El Salvador, and their names match with the ones recorded in PEAR.

4) **Honduras 2013**

Unclear where the difference comes from. PEAR uses data from Kouba and Weiss (2025), and all female-coded MPs have clearly female names.

5) **Moldova 2010**

This difference may be due to both datasets including values from different elections. PEAR covers the 2009 elections, V-Dem and Hughes et al. (2017) likely cover the 2010 elections.

6) **Gambia 2002**

The other datasets are missing the appointed MPs.

7) **Botswana 1974**

The other datasets are missing the appointed MPs.

8) **Poland 1947**

Unclear where the difference comes from. Data in PEAR comes from Wikipedia but can be traced back to original Polish sources.

9) **Kuwait 2014**

The other datasets are missing the ministers who also sit in parliament.

10) **Angola 1992**

Unclear where the difference comes from. I double-checked all entries, and they all seem correct. The data comes directly from the Angolan parliament and all MPs are shown with photos.

11) **Bulgaria 1962**

Unclear where the difference comes from. Data in PEAR have been provided by the Bulgarian parliament.

12) **El Salvador 1960**

Unclear why other datasets have coded El Salvador as not having any female MPs. The MPs identified as female in PEAR have clearly female names. Also see El Salvador 1956 above.

13) **Belarus 2000**

I was only able to retrieve data from 2002, which might explain the discrepancy.

14) **Angola 2012**

Unclear where the difference comes from. I double-checked all entries, and they all seem correct. The data comes directly from the Angolan parliament, and all MPs are shown with photos.

15) **North Korea 1982**

Unclear where the difference comes from. Data for PEAR comes from Wikipedia, which can be traced back to an original resource – a book.

16) **Bangladesh 1988**

Presumably, there must be a mistake in other datasets relating to the presence of reserved seats for women. Yet, in 1988, there were no reserved seats for women (unlike in later elections in Bangladesh).

17) **Kuwait 2012**

The other datasets seem to have used data from the subsequent legislature, which is recorded for the year 2013 in PEAR.

18) **Nepal 2013**

Unclear where the difference comes from. A native speaker has coded MPs' gender based on their names for PEAR.

19) **Antigua and Barbuda 1999**

Unclear how other datasets reach a share of women of 5.3%. Given a parliament size of 17 MPs, this is not possible.

20) **Antigua and Barbuda 1994**

Similar issue as above.

21) **Singapore 2002**

Unclear where the difference comes from. I double-checked other resources, including the website of the People's Action Party (PAP), which also only mentions one woman in parliament.

22) **El Salvador 1966**

Unclear where the difference comes from. All MPs designated as male clearly have male names.

23) **Djibouti 2013**

There may have been errors in PEAR's coding of some names. These have been done with the help of large language models.

24) **Cape Verde 1980**

Unclear where the difference comes from. All MPs designated as male clearly have male names.

D Age Discrepancy

These are cases where the mean age of MPs deviates from [Stockemer and Sundström \(2022\)](#)'s data collection by more than 1 year.

1) Syria 2012

There is a considerable discrepancy here. However, both datasets achieve near-perfect coverage of the MP's ages. There must be a difference in the underlying data. PEAR uses data from the (former) Syrian government official website.

2) Cameroon 2007

WARP only has a coverage of 40% of MPs in this year. PEAR achieves a 100% coverage.

3) Cameroon 1988

WARP only has a coverage of 8% of MPs in this year. PEAR achieves a 100% coverage.

4) Tanzania 2015

This discrepancy is likely due to different MP coverages. PEAR achieves a coverage of 97.96% whereas WARP has a coverage of 105%.

E Codebook - Cross-National Data

country: Full name of the country

cowcode: Correlates of War Country Code

iso: ISO 3166-1 A-3 country codes

legislature__start: Year in which the lower house/unicameral elections took place

legislature__end: Final year of the legislative term

leg__seats: Number of nominal seats in the legislature

leg__nr: Chronological number of legislative term in the country under authoritarian rule since 1945

vdemid: Varieties of Democracy Identifier for the country

no: Number of MPs identified in PEAR

coverage__mps: Share of MPs included in PEAR

coverage__gender: Percentage of MPs for whom gender is known

coverage__age: Percentage of MPs for whom age is known

coverage__party: Percentage of MPs for whom the party affiliation is known

coverage__incum: Coverage of MPs for whom the incumbency status is known

retentionrate: Retention rate of MPs

women__share: Share of female MPs

meanage: Mean age of MPs

medianage: Median age of MPs

thirtyorunder__share: Share of MPs that are 30 years of age or under

thirtyfiveorunder__share: Share of MPs that are 35 years of age or under

fortyorunder__share: Share of MPs that are 40 years of age or under

seventyorover__share: Share of MPs that are 70 years of age or over

seventyfiveorover__share: Share of MPs that are 75 years of age or over

eightyorover__share: Share of MPs that are 80 years of age or over

womenthirtyorunder__share: Share of female MPs that are 30 years of age or under

womenthirtyfiveorunder__share: Share of female MPs that are 35 years of age or under

womenfortyorunder__share: Share of female MPs that are 40 years of age or under

womenseventyorover__share: Share of female MPs that are 70 years of age or over

womenseventyfiveorover__share: Share of female MPs that are 75 years of age or over

womeneightyorover__share: Share of female MPs that are 80 years of age or over

no__rp: Number of MPs identified as members of the ruling party

rulingparty__share: Share of MPs identified as members of the ruling party

retentionrate__rp: Retention rate among ruling party MPs

women__share__rp: Share of women among ruling party MPs

meanage__rp: Mean age of ruling party MPs

medianage__rp: Median age of ruling party MPs

thirtyorunder__share__rp: Share of ruling party MPs that are 30 years of age or under

thirtyfiveorunder__share__rp: Share of ruling party MPs that are 35 years of age or under

fortyorunder__share__rp: Share of ruling party MPs that are 40 years of age or under

seventyorover__share__rp: Share of ruling party MPs that are 70 years of age or over

over

seventyfiveorover__share__rp: Share of ruling party MPs that are 75 years of age or over

womenthirtyorunder__share__rp: Share of female ruling party MPs that are 30 years of age or under

womenthirtyfiveorunder__share__rp: Share of female ruling party MPs that are 35 years of age or under

womenfortyorunder__share__rp: Share of female ruling party MPs that are 40 years of age or under

womenseventyorover__share__rp: Share of female ruling party MPs that are 70 years of age or over

womenseventyfiveorover__share__rp: Share of female ruling party MPs that are 75 years of age or over

womeneightyorover__share__rp: Share of female ruling party MPs that are 80 years of age or over

no_rs: Number of MPs classified as regime supporters

regimesupporters__share: Share of all MPs that are classified as regime supporters

retentionrate_rs: Retention rate among those classified as regime supporters

women__share_rs: Share of female MPs among those classified as regime supporters

meanage_rs: Mean age of those MPs classified as regime supporters

medianage_rs: Median age of those MPs classified as regime supporters

thirtyorunder__share__rs: Share of MPs that are 30 years of age or under among those classified as regime supporters

thirtyfiveorunder__share__rs: Share of MPs that are 35 years of age or under among those classified as regime supporters

fortyorunder__share__rs: Share of MPs that are 40 years of age or under among those classified as regime supporters

seventyorovery__share__rs: Share of MPs that are 70 years of age or over among those classified as regime supporters

seventyfiveorovery__share__rs: Share of MPs that are 75 years of age or over among those classified as regime supporters

eightyorovery__share__rs: Share of MPs that are 80 years of age or over among those classified as regime supporters

womenthirtyorunder__share__rs: Share of female MPs that are 30 years of age or under among those classified as regime supporters

womenthirtyfiveorunder__share__rs: Share of female MPs that are 35 years of age or under among those classified as regime supporters

womenfortyorunder__share__rs: Share of female MPs that are 40 years of age or under among those classified as regime supporters

womenseventyorovery__share__rs: Share of female MPs that are 70 years of age or over among those classified as regime supporters

womenseventyfiveorovery__share__rs: Share of female MPs that are 75 years of age or over among those classified as regime supporters

womeneightyorovery__share__rs: Share of female MPs that are 80 years of age or over among those classified as regime supporters

no_op: Number of opposition MPs

opposition_share: Share of opposition MPs

retentionrate_op: Retention rate among opposition MPs

women_share_op: Share of female MPs among the opposition

meanage_op: Mean age among opposition MPs

medianage_op: Median age among opposition MPs

thirtyorunder_share_op: Share of MPs that are 30 years of age or under among opposition MPs

thirtyfiveorunder_share_op: Share of MPs that are 35 years of age or under among opposition MPs

fortyorunder_share_op: Share of MPs that are 40 years of age or under among opposition MPs

seventyover_share_op: Share of MPs that are 70 years of age or over among opposition MPs

seventyfiveorover_share_op: Share of MPs that are 75 years of age or over among opposition MPs

eightyover_share_op: Share of MPs that are 80 years of age or over among opposition MPs

womenthirtyorunder_share_op: Share of female MPs that are 30 years of age or under among opposition MPs

womenthirtyfiveorunder_share_op: Share of female MPs that are 35 years of age or under among opposition MPs

womenfortyorunder_share_op: Share of female MPs that are 40 years of age or under among opposition MPs

womenseventyorovertwo_share_op: Share of female MPs that are 70 years of age or over among opposition MPs

womenseventyfiveorovertwo_share_op: Share of female MPs that are 75 years of age or over among opposition MPs

num_parties: Number of parties identified

seatchange_abs: Change in the number of seats in the legislature in absolute numbers compared to the previous legislative term (NA if the previous election is not itself included in PEAR)

seatchange_rel: Change in the number of seats in the legislature relative to the previous legislative term (NA if the previous election is not itself included in PEAR)

yrssince: Years since last election

prev_election_year: Year of the previous legislative election, as identified from the National Elections Database (Marx, Pons and Rollet, 2024) and/or PEAR's own collected terms

coverage_gap: Indicates whether the previous legislative election is itself included in PEAR ("ok_consecutive"), is the first collected or first-ever election for that country ("first_collected_term" / "confirmed_first_election"), is known but not yet collected ("coverage_gap_detected"), or was resolved by hand ("manually_resolved")

retentionrate_volat: Retention rate volatility as the difference between the retention rate at t and the retention rate at $t-1$ (NA if the previous election is not itself included in PEAR)

adj_retention: Adjusted retention rate as number of incumbents at t divided by the number of seats in the legislature at $t-1$ (NA if the previous election is not itself included in PEAR)

adj_retention_rp: Adjusted retention rate among ruling party MPs (NA if the previous election is not itself included in PEAR)

adj_retention_rs: Adjusted retention rate among regime-supporting MPs (NA if the previous election is not itself included in PEAR)

adj_retention_op: Adjusted retention rate among opposition MPs (NA if the previous election is not itself included in PEAR)

num_parties: Number of parties identified

F Codebook - Individual-Level Data

country: Full name of the country

cowcode: Correlates of War Country Code

iso: ISO 3166-1 A-3 country codes

vdemid: Varieties of Democracy Identifier for the country

legislature__start: Year in which the lower house/unicameral elections took place

legislature__end: Final year of the legislative term

leg__nr: Chronological number of legislative term in the country under authoritarian rule since 1945

name: Name of the member of parliament in local language

name__english: Name of the member of parliament romanized into English

no: Number of the member of parliament

party: Party affiliation of the member of parliament, party name short title

party__english: Party affiliation of the member of parliament, party name full title in English

partyfacts__id: PartyFacts ID number of party

coalition: Coalition affiliation of the member of parliament, if party affiliation unknown

gender: Gender of the member of parliament, 0 = male, 1 = female

yob: Year of birth of the member of parliament

age: Age of the member of parliament, calculated by subtracting the year of birth from the starting year of the legislative term

incumbent: 1 = member of parliament was also a member in the preceding legislative term; 0 = member of parliament was not a member in the preceding legislative term

regimesupport: 1 = member of parliament belongs to a party that is supportive of the authoritarian regime; 0 = member of parliament does not belong to a party that is supportive of the authoritarian regime

rulingparty: 1 = member of parliament belongs to the ruling party; 0 = member of parliament does not belong to the ruling party

opposition: 1 = member of parliament belongs to an opposition party; 0 = member of parliament does not belong to an opposition party

constituency: If applicable, the name of the constituency that the member of parliament represents

selection: Includes notes on whether member of parliament was elected, appointed, or gained their position through another mechanism
